

Latent prints have met their match.

Let Matcher get to work for you to quickly pinpoint potential matches.

This powerful tool for fingerprint examiners adds minutia pattern searching capability to our Comparator software to perform automated comparisons between a latent and a tenprint card or known palmprint.

Latent search features:

- Search with as few as 5 minutia points
- Ideal for palms
- 360-degree search or restrict angles
- Rotate latent appropriately
- Matches are highlighted
- Automated minutia detection
- Save minutia data

System Requirements:

- Windows 10 & 11

Save time when searching for latent print matches with Matcher.

“The analysts use the matcher for searching difficult prints when the orientation and/or the anatomical location is in question. One of our analysts has really mastered CSIpix Matcher and has made some incredible identifications utilizing it”

– *Crime Lab Analyst Supervisor, FL*

“I have been using Matcher for a number of years and I find that it really shines when you have a partial impression of unknown origin (palm or finger) and orientation. Matcher has successfully correlated many difficult comparisons which may have otherwise went unmatched. It is one of the most useful tools that delivers when you really need it to.” -
